

HIGHLY EFFECTIVE
N95 FILTER + UVC
AIR PURIFICATION

Allanson AirLock UV

Locked and loaded to purify your air

Keep your workers safe and purify the air they breathe with UVC technology. Paper and fibre respirator technologies simply trap viruses and bacteria – UVC light breaks them down! With Allanson's AirLock UV respirator cartridge, your workers can use existing respirator systems in a whole new way. Ideal for extended use (>8h) once fully charged, Airlock UV has been carefully designed, engineered and tested to provide maximum protection with minimum breathing effort.

Integrated USB-C charging and battery level LED array provide simple, long lasting UVC support to the N95 pre-filter. Unique in its class – Airlock UV combines traditional respirator technologies (N95/bayonet-style 3M-compatible connectors) with tried-and-true technology for a modern approach to air purification.

BENEFITS

- ▶ 2 stage filtration and sterilization process
- ▶ Easily works with existing respirator technologies
- ▶ Works with various pre-filters using industry-standard form factors
- ▶ Provides workers with confidence when working in crowded or unsanitary spaces
- ▶ Convenient USB-C integrated charging
- ▶ Integrated battery delivers >8h of protection on a full charge

MADE IN
CANADA

Provides clean fresh air
for confined indoor spaces
