

# Denny's Retrofit Pylon Sign!

## LEDrofit Lighting Solutions

Denny's is America's Diner where guests have and continue to enjoy hearty meals for over 60 years. To continue to uphold their image, it was time for an upgrade of their pylon sign located in Grants, NM.

### THE SOLUTION

Allanson LEDrofit lamps were installed in the Denny's pylon sign. LEDrofit was a quick and easy replacement for their existing T12 fluorescent lamps, which noticeably enhanced the brightness of the sign (shown in the before and after images below). In only few short hours, 22 LEDrofit lamps replaced 22 T12 fluorescent lamps, which were installed in one row at 12" centers into their existing 30" deep, double sided pylon sign. Allanson's LEDrofit sleek design and superior lighting surpassed others in the market and was the preferred reliable solution.

Allanson LEDrofit lamps come in standard T12 Fluorescent lamp sizes that make fluorescent to LED conversions easy. Simply remove the fluorescent lamps and replace with LEDrofit in the existing lamp sockets, then wire to Allanson 12V LED Power Supplies.

Allanson's **"one system fits all"** LEDrofit provides a cost effective, longer lasting, and energy saving LED solution.
